A triangle is a polygon with three edges and three vertices. It is one of the basic shapes in geometry. A triangle with vertices A, B, and C is denoted $\triangle ABC$. In Euclidean geometry any three points, when non-collinear, determine a unique triangle and simultaneously, a unique plane (i.e. a two-dimensional Euclidean space). In other words, there is only one plane that contains that triangle, and every ...

A special right triangle is a right triangle with some regular feature that makes calculations on the triangle easier, or for which simple formulas exist. For example, a right triangle may have angles that form simple relationships, such as $45^\circ-45^\circ-90^\circ$. This is called an "angle-based" right triangle.

2 Chapter 1 • Right Triangle Trigonometry §1.1 (a) Two acute angles are complementary if their sum equals 90 . In other words, if $0 < A, B < 90$ then A and B are complementary if $A + B = 90$. (b) Two angles between 0 and 180 are supplementary if their sum equals 180 . In other words, if $0 < A, B < 180$ then A and B are supplementary if $A + B = 180$.

En géométrie euclidienne, la somme des angles d'un triangle est égale à l'angle plat, soit 180 degrés ou π radians. Ce résultat est connu et démontré par Euclide, dans ses *Éléments*. Il est équivalent à l'axiome des parallèles d'Euclide : Par un point donné, on peut mener une et une seule parallèle à une droite donnée.

Angle Sum of Triangles and Quadrilaterals

En géométrie euclidienne, un triangle est une figure plane, formée par trois points appelés sommets, par les trois segments qui les relient, appelés côtés, délimitant un domaine du plan appelé intérieur. Lorsque les sommets sont distincts deux à deux, en chaque sommet les côtés délimitent un angle intérieur, d'où vient la dénomination de « triangle ».
