Chemistry is the scientific discipline involved with elements and compounds composed of atoms, molecules and ions: their composition, structure, properties, behavior and the changes they undergo during a reaction with other substances.. In the scope of its subject, chemistry occupies an intermediate position between physics and biology. It is sometimes called the central science because it ...

where  $dV$  is the change in volume of the system. The internal energy of an isolated system is constant Note. It is now common in physical chemistry and chemistry, as opposed to physics, to consider the work  $dw$  to be that done on the system, rather than that done by the system, so in chemistry the

### The Four Laws of Thermodynamics - Stem2

In physical and organic chemistry, the dispersity is a measure of the heterogeneity of sizes of molecules or particles in a mixture. A collection of objects is called uniform if the objects have the same size, shape, or mass. A sample of objects that have an inconsistent size, shape and mass distribution is called non-uniform.The objects can be in any form of chemical dispersion, such as ...
