Free download Organic Chemistry (9th edition) written by Francis A. Carey and Robert M. Giuliano in .pdf published in 2014. According to the authors, "The goal of this text, as it has been through eight previous editions, is to provide students with the conceptual tools to understand and apply the relationship between the structures of organic compounds and their properties.

In chemistry, resonance is a way of describing bonding in certain molecules or ions by the combination of several contributing structures (or forms, also variously known as resonance structures or canonical structures) into a resonance hybrid (or hybrid structure) in valence bond theory. It has particular value for describing delocalized electrons within certain molecules or polyatomic ions ...

Enzyme catalysis is the increase in the rate of a chemical reaction by the active site of a protein. The protein catalyst may be part of a multi-subunit complex, and/or may transiently or permanently associate with a Cofactor (e.g. adenosine triphosphate).

Catalysis of biochemical reactions in the cell is vital due to the very low reaction rates of the uncatalysed reactions at room temperature ...

The specific reaction of carbonyl compounds with 2,4-dinitrophenylhydrazine (DNPH) forming the corresponding 2,4-DNPhydrazones is one of the most important qualitative and quantitative methods in organic analysis.
