Table : Phase transitions for DQPSK modulation (Ref Table 5.1 of ETSI 301-893 V3.2.1). The modulation symbol is formed by applying a phase offset to previous symbol and is defined as follows:  $\phi_k = \phi_{k-1} + \Delta\phi_k$ . Alternately, the phase transitions can be represented as  $\phi_k = \phi_{k-1} + \Delta\phi_k$ . The constellation of the DQPSK occupies phase values separated by  $\pi/4$  as shown below in the blue dots. The red lines shows all possible phase ...

Table : Phase transitions for D8PSK modulation (Ref Table 5.2 of ETSI 301-893 V3.2.1). The modulation symbol is formed by applying a phase offset to previous symbol and is defined as follows:  $\phi_k = \phi_{k-1} + \Delta\phi_k$ . Alternately, the phase transitions can be represented as  $\phi_k = \phi_{k-1} + \Delta\phi_k$ . The constellation of the D8PSK occupies phase values separated by  $\pi/8$  as shown below in the blue dots. The red lines shows all possible phase ...

Baseband is a signal that has a near-zero frequency range, i.e. a spectral magnitude that is nonzero only for frequencies in the vicinity of the origin (termed  $f = 0$ ) and negligible elsewhere. In telecommunications and signal processing, baseband signals are transmitted without modulation, that is, without any shift in the range of frequencies of the signal.
