Adverse Childhood Events Study. The ACE study was conducted in 1998 to determine if there was a link between stressful events in childhood and health issues that may turn up later in adult life. 17,000 people participated in the study during which participants were asked a short series of questions concerning specific stressors that may have occurred before the age of eighteen.

Social isolation is a state of complete or near-complete lack of contact between an individual and society. It differs from loneliness, which reflects temporary and involuntary lack of contact with other humans in the world. Social isolation can be an issue for individuals of any age, though symptoms may differ by age group. Social isolation has similar characteristics in both temporary ...
