In propositional logic, transposition is a valid rule of replacement that permits one to switch the antecedent with the consequent of a conditional statement in a logical proof if they are also both negated. It is the inference from the truth of "A implies B" the truth of "Not-B implies not-A", and conversely. It is very closely related to the rule of inference modus tollens.

Die moderne symbolische Logik verwendet statt der natürlichen Sprache eine künstliche Sprache (ein Satz wie Der Apfel ist rot wird z. B. in der Prädikatenlogik als $(\forall x)(A(x) \rightarrow B(x))$ formalisiert, wobei für Der Apfel und für ist rot steht) und verwendet streng definierte Schlussregeln. Ein einfaches Beispiel für so ein formales System ist die Aussagenlogik (dabei werden sogenannte atomare Aussagen durch ...
