Test Statistics The stats program works out the p value either directly for the statistic you're interested in (e.g. a correlation), or for a test statistic that has a 1:1 relationship with the effect statistic. A test statistic is just another kind of effect statistic, one that is easier for statisticians and computers to handle. Common test statistics are t, F, and chi-squared.

Example 5: In March 2013, Royal Auto sent me one of those "Win big!" flyers with a fake car key taped to it. The various prizes, and chances of winning, are shown at right. This is a discrete probability distribution. The discrete variable X is "prize value", and the five possible values of X are \$100,000 down to \$5.. Remember the two interpretations of probability: probability of one ...

Mathematical statistics is the application of mathematics to statistics. Mathematical techniques used for this include mathematical analysis, linear algebra, stochastic analysis, differential equations, and measure-theoretic probability theory.. Overview. In applying statistics to a problem, it is common practice to start with a population or process to be studied.

Histograms in Pure Python. When you are preparing to plot a histogram, it is simplest to not think in terms of bins but rather to report how many times each value appears (a frequency table).

The probability of a particular event occurring is the number of outcomes that result in that particular event divided by the total number of possible outcomes.

Good ol' Sitemeter never fails to yield its share of fascinating factoids. For example, earlier today some brave Canadian Googler found my blog by searching for, and I quote, "think vs believe semantic difference ".Having nothing but love for my readers, I think it only fair that I might attempt to address the deep and profound "think" vs. "believe" distinction.

A report from the National Science Foundation recently stated that a majority of young people believe astrology to be scientific, as reported by Science News, Mother Jones, UPI, and Slashdot, among others. Troubling if true, but I believe this to be a faulty interpretation of the NSF report. And I have human subjects data to support this argument.
